Professional Summary

Full-Stack developer with hands-on experience in IoT project Terrasmart, containerization, cloud infrastructure (AWS). Skilled in **React.js**, GraphQL, **Node.js**, PostgreSQL, Docker, and CI/CD pipeline. Adept at building scalable applications and deploying reliable cloud-native solutions in Agile environments.

Professional Experience

Zigron | Full-stack Developer | Islamabad - Pakistan **March 2025 – May 2025**

- Developed front-end interfaces with **React.js** and integrated **GraphQL** APIs for real-time data visualization.
- Built and consumed GraphQL APIs using Node.js, enabling efficient data queries for IoT devices.
- Designed and optimized PostgreSQL database to store sensor readings, site metadata, and device configurations.
- Deployed and maintained backend services on AWS Cloud to ensure scalability and reliability.
- Monitored logs, metrics, and system health to ensure uptime and reliability.
- Collaborated with teams using Jira (task tracking) and Slack (communication) in an Agile development environment.

Education

Bachelors of Science in Computer Science (BS CS)
Virtual University of Pakistan (Aug 2019 – Aug 2023)

Tools | Software

Project Management • Jira • Git • Github • Bitbucket	**Languages** • **JavaScript** • **TypeScript** • **Python**	**Framework/libraries** • React Js • Node Js • Express • Tailwind CSS
Tools\frameworks • Serverless (aws lambda) • Postman • MicroSoft vsCode • pgAdmin for SQL	**Cloud** • AWS • Vercel **DataBases** • PostgresSql/MySql – SQL	**Automation - Testing** • Playwright (JS) • Bash / shell • Python / scripting

Projects

E-Commerce Dashboard

- Developed a full-stack **e-commerce management dashboard** using **React.js**, **Redux Toolkit**, and **Tailwind CSS**, with responsive interfaces for managing products, inventory, orders, revenue, and store settings.
- Built and integrated **REST APIs** using **Node.js** and **Express.js**, implementing **JWT authentication**, role-based access control, and protected admin routes.
- Designed and optimized PostgreSQL database to store sensor readings, site metadata, and device configurations.
- Implemented **real-time updates** using **Socket.IO** for inventory alerts, notifications, and live dashboard data.
- Containerized the application using **Docker** and **Docker Compose**, separating frontend, backend, and PostgreSQL services for consistent local development and deployment.
- Deployed the frontend on **Vercel** and connected the backend to a managed **PostgreSQL** database, configuring environment variables, CORS, authentication, and production services.
- Implemented secure admin features including **role-based permissions**, read-only demo access, admin management, and protected CRUD operations for production-ready dashboard functionality.

---

Terrasmart project

- Developed front-end interfaces with **React.js** and integrated **GraphQL** APIs for real-time data visualization..
- Built and consumed GraphQL APIs using Node.js, enabling efficient data queries.
- Worked with database designed and optimized PostgreSQL database to store sensor readings, site metadata, and device configurations.
- Deployed and maintained backend services on AWS Cloud to ensure scalability and reliability.
- Monitored logs, metrics, and system health to ensure uptime and reliability.
- Collaborated with teams using Jira (task tracking) and Slack (communication) in an Agile development environment.

Interests and Activities

- I have a passion for exploring new technologies in my free time, driven by a constant curiosity about the mechanics behind the scenes.

- I thoroughly enjoy playing table tennis because of its fast pace and the quick thinking and reflexes it demands.
